Subject: RE: USS Lead Outreach Efforts

Leo:

I checked my notes and found references to the following pre-2016 events. I could try and put my finger on source documents if necessary. I would think that many of these efforts generated public engagement efforts, but I am not sure how far back you want to go.

November 1993: EPA entered into an Administrative Order on Consent under RCRA with MRRC, which was set up to assume liability for USS Lead.

1994: While we haven't been able to find it, we believe that ATSDR issued a public health assessment report for the USS Lead site.

1998: We believe that ATSDR issued an updated report. Again, we haven't been able to locate a copy.

July 2001: Site Wide Sampling and Analysis Report issued by Geochemical Solutions after the demolition of the smelter indicating that all cleanup goals had been achieved.

March 2004: Geochemical issued its final RCRA investigation report for USS Lead, and IDEM issued a post-closure permit for the onsite CAMU. The permit would have surely involved public notice.

Don
